

Windows Taste deaktivieren

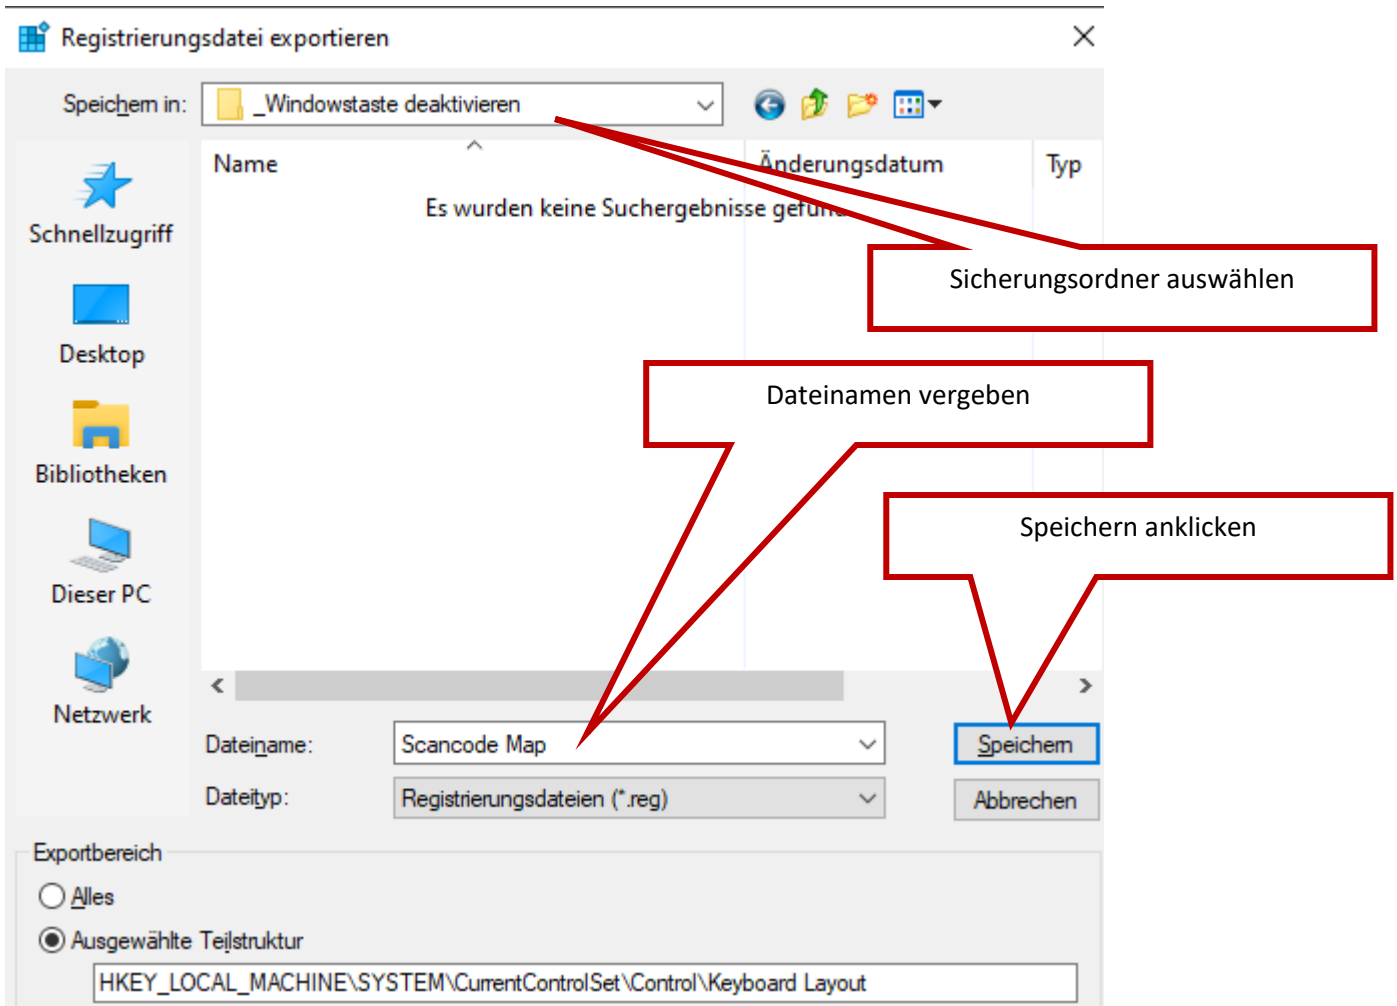

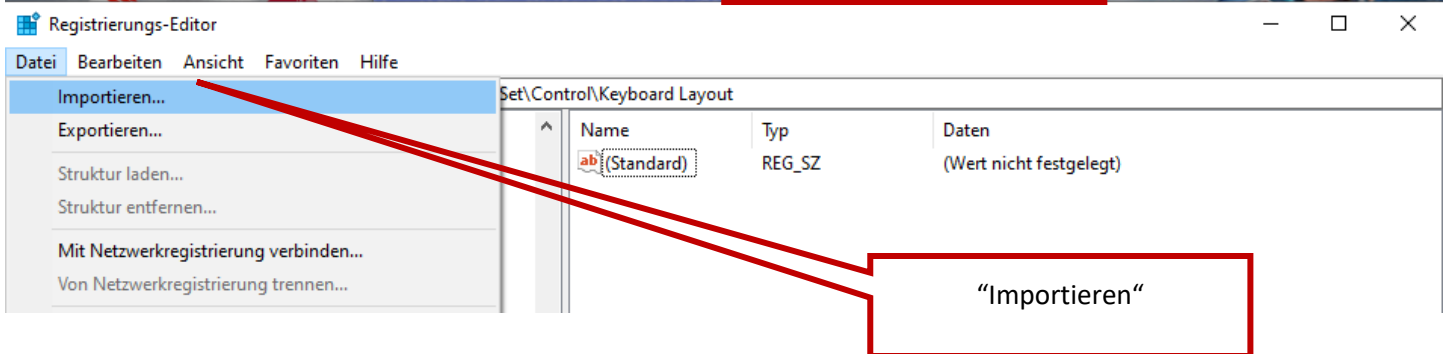

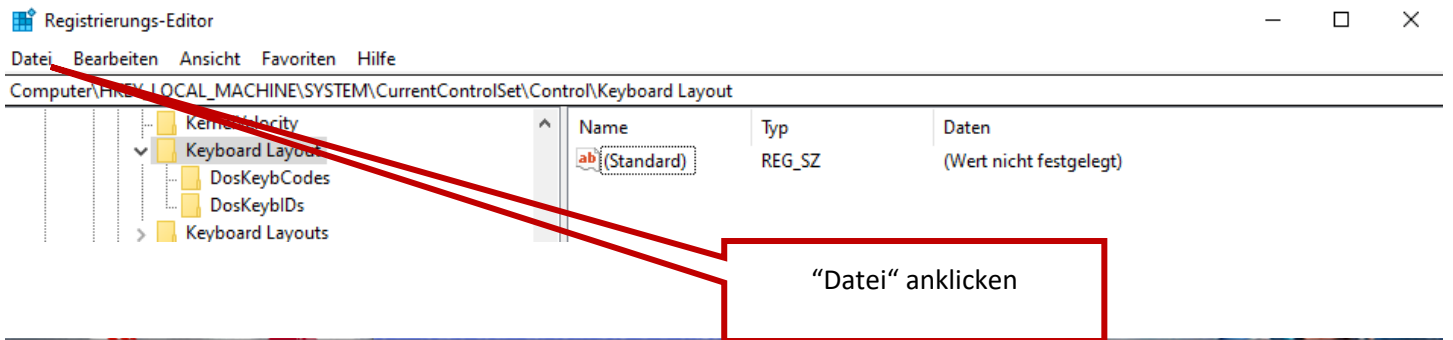

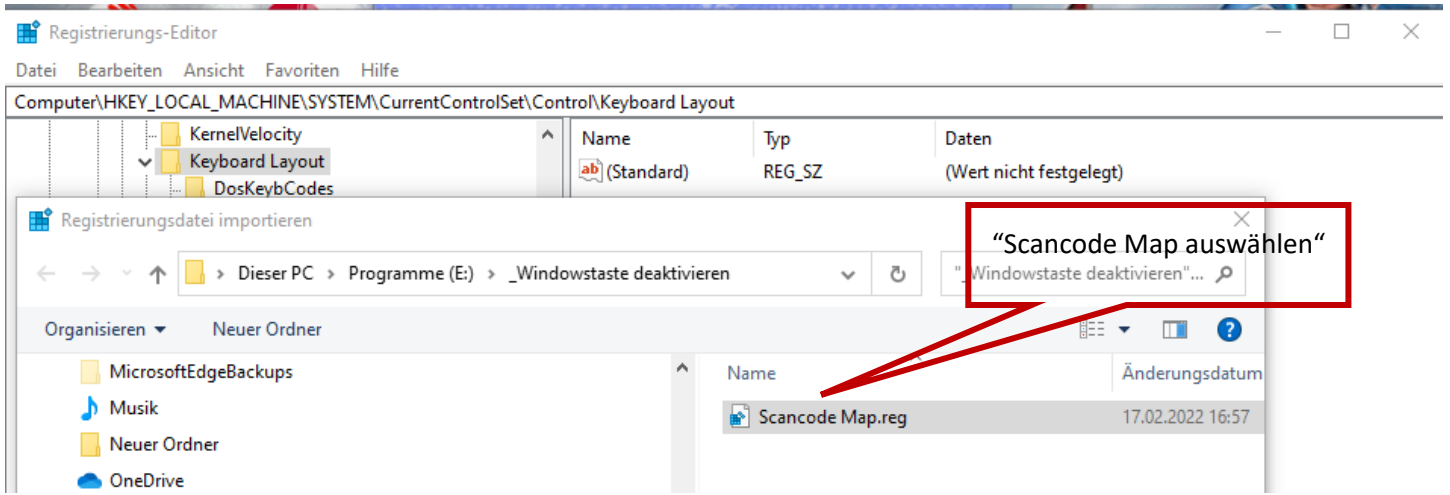

Damit man nicht immer die “Scancode Map“ neu anlegen muss.
Sollte ihr diese sichern. Hab dazu einen Ordner mit “_Windowstaste deaktivieren“ angelegt.

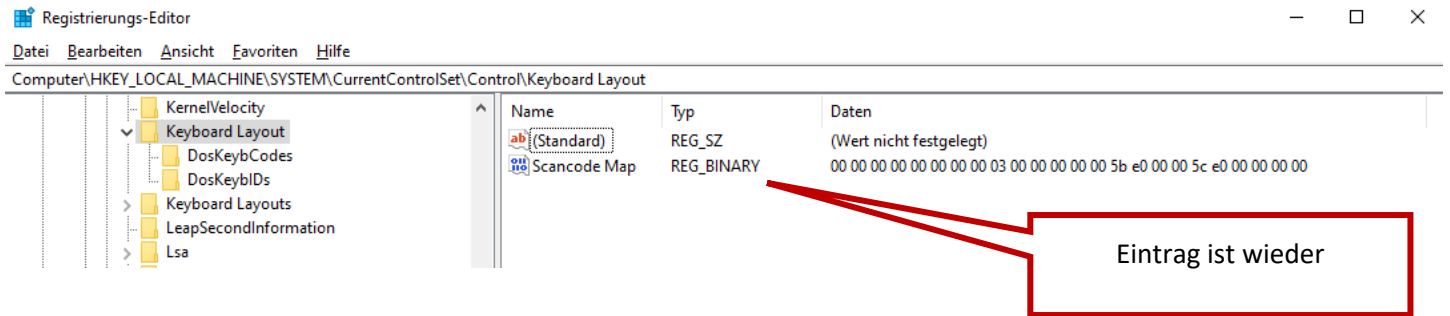

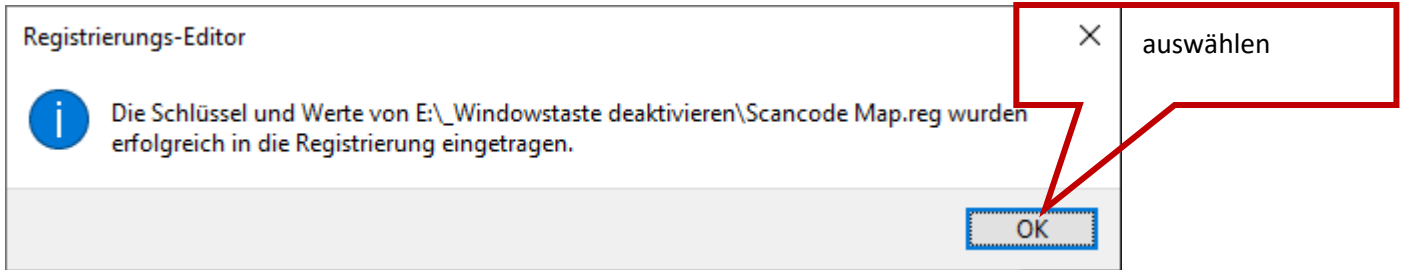

Dadurch kann der "Reg Key" leicht wieder importiert werden

“Scancode Map auswählen“

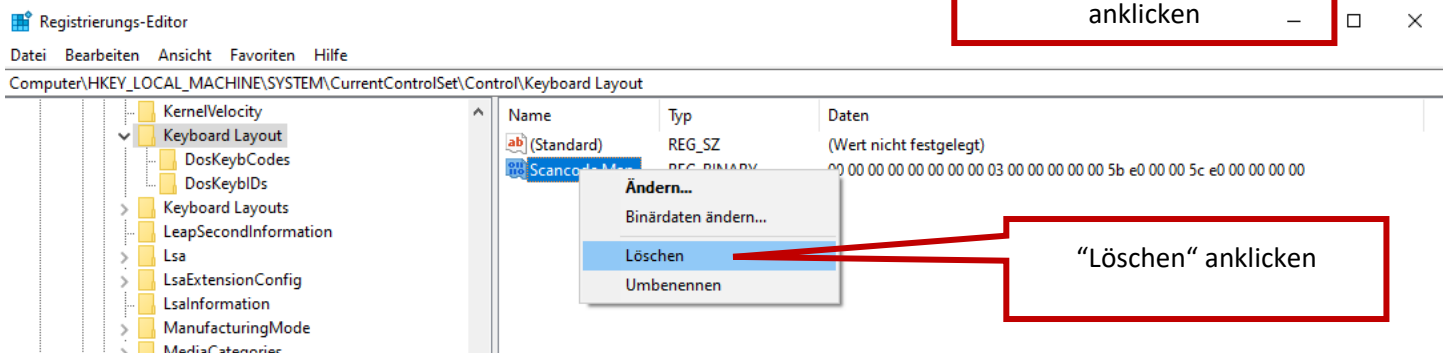

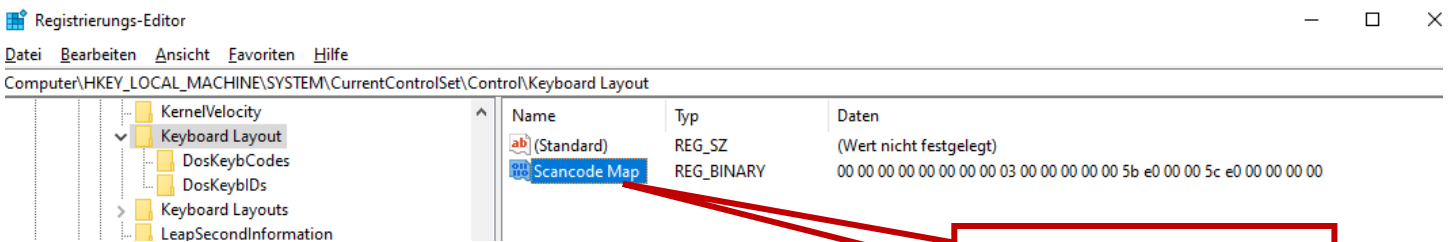

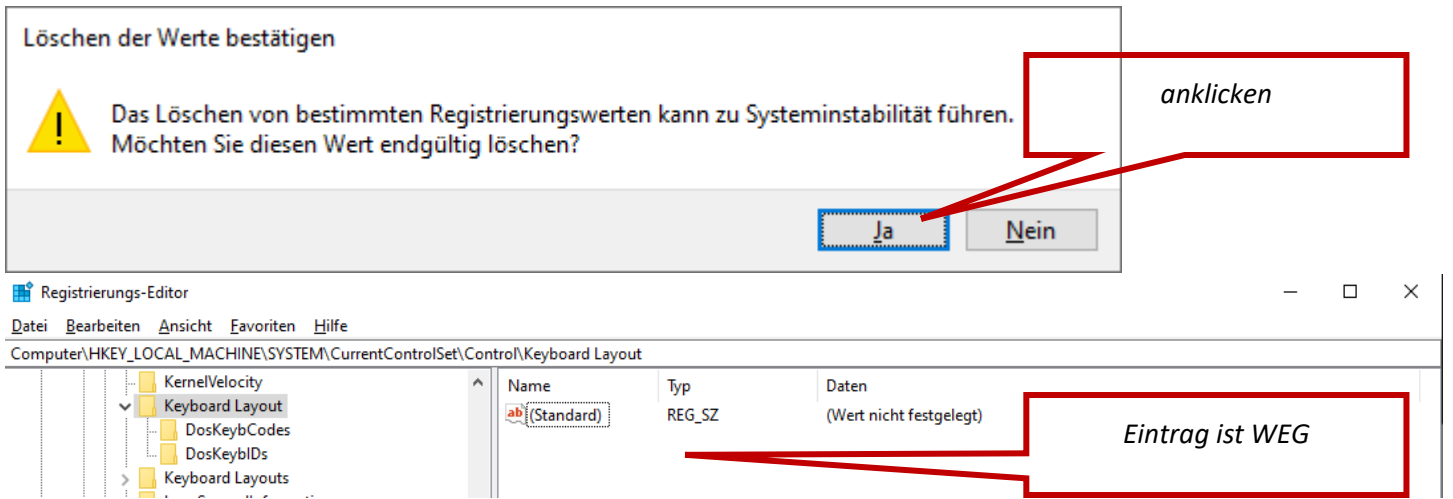

WICHTIG: nach jeder Änderung in der REGEDIT muss der PC **NEU** gestartet werden

Soll die Windows Taste wieder ihren Dienst machen!

Mit Regedit wieder zu:

HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Control\Keyboard Layout

WICHTIG: nach jeder Änderung in der REGEDIT muss der PC **NEU** gestartet werden.
Nach dem NEUSTART funktioniert die Windows-Taste wieder
